James D. Malley, Karen G. Malley, Sinisa Pajevic

Statistical Learning for Biomedical Data (Practical Guides to Biostatistics and Epidemiology) James D. Malley, Karen G. Malley, Sinisa Pajevic

This book is for anyone who has biomedical data and needs to identify variables that predict an outcome, for two-group outcomes such as tumor/not-tumor, survival/death, or response from treatment. Statistical learning machines are ideally suited to these types of prediction problems, especially if the variables being studied may not meet the assumptions of traditional techniques. Learning machines come from the world of probability and computer science but are not yet widely used in biomedical research. This introduction brings learning machine techniques to the biomedical world in an accessible way, explaining the underlying principles in nontechnical language and using extensive examples and figures. The authors connect these new methods to familiar techniques by showing how to use the learning machine models to generate smaller, more easily interpretable traditional models. Coverage includes single decision trees, multiple-tree techniques such as Random Forests(TM), neural nets, support vector machines, nearest neighbors and boosting.

From reader reviews:

Carol Welch:

Do you have favorite book? When you have, what is your favorite's book? E-book is very important thing for us to be aware of everything in the world. Each book has different aim or perhaps goal; it means that guide has different type. Some people really feel enjoy to spend their time to read a book. They are reading whatever they take because their hobby is usually reading a book. What about the person who don't like studying a book? Sometime, person feel need book if they found difficult problem or exercise. Well, probably you should have this Statistical Learning for Biomedical Data (Practical Guides to Biostatistics and Epidemiology).

Jeremy Smith:

Information is provisions for people to get better life, information currently can get by anyone with everywhere. The information can be a know-how or any news even a problem. What people must be consider while those information which is in the former life are hard to be find than now's taking seriously which one is appropriate to believe or which one the resource are convinced. If you have the unstable resource then you have it as your main information it will have huge disadvantage for you. All those possibilities will not happen within you if you take Statistical Learning for Biomedical Data (Practical Guides to Biostatistics and Epidemiology) as the daily resource information.

Paul Birch:

It is possible to spend your free time to learn this book this guide. This Statistical Learning for Biomedical Data (Practical Guides to Biostatistics and Epidemiology) is simple to develop you can read it in the park your car, in the beach, train and soon. If you did not include much space to bring the particular printed book, you can buy the actual e-book. It is make you easier to read it. You can save the particular book in your smart phone. Thus there are a lot of benefits that you will get when you buy this book.

Katrina Scofield:

That guide can make you to feel relax. That book Statistical Learning for Biomedical Data (Practical Guides to Biostatistics and Epidemiology) was bright colored and of course has pictures around. As we know that book Statistical Learning for Biomedical Data (Practical Guides to Biostatistics and Epidemiology) has many kinds or variety. Start from kids until adolescents. For example Naruto or Investigator Conan you can read and believe you are the character on there. Therefore not at all of book are usually make you bored, any it can make you feel happy, fun and unwind. Try to choose the best book for you personally and try to like reading this.
