Fusarium: Genomics, Molecular and Cellular Biology

Fusarium: Genomics, Molecular and Cellular Biology

The fungus *Fusarium* is a major plant pathogen that causes disease in nearly every agriculturally important plant. In addition, some strains produce mycotoxins that can cause serious illness in humans and livestock. The enormous economic importance of, and health hazards posed by, *Fusarium* have fuelled research by scientists worldwide into its biochemistry, genetics, genomics, proteomics, and metabolomics. The primary aim of this research is the identification of strategies to reduce crop diseases and the risks posed to human and animal health. The wealth of information derived from this research has allowed *Fusarium* to serve as a model system for eukaryotic biology, permitting tremendous advances in the understanding of the genetic and biochemical processes involved in the fungus-plant interaction, fungal pathogenesis, toxin biosynthesis, genome plasticity, and adaptive evolution to ecological niches. In this book, an international group of researchers critically reviews the most important current research on the genomics and molecular and cellular biology of *Fusarium*. The opening chapter provides a fascinating introduction to the organism. Subsequent chapters deal with: sex and fruiting * genome structural dynamics * molecular genetics and genomic approaches to study pathogenesis in wheat * proteomic analysis of the fungus-host interaction * repeat-induced point mutation, DNA methylation, and heterochromatin in *Fusarium graminearum* (*Gibberella zeae*) * the nitrogen regulation network and its impact on secondary metabolism and pathogenicity * diversity of polyketide synthases * plant responses to *Fusarium* metabolites. This volume will be essential for everyone working with *Fusarium* and other filamentous fungi. It is recommended for all biology, agriculture, and medical libraries. *** "...produced and edited to the highest of standards." --IMA Fungus *** "...a concise and highly updated overview of recent research in the genetics of *Fusarium*." -- Quart. Rev. Biol. [Subject: Mycology, Microbiology, Genomics, Pathogenicity, Life Science, Agricultural Studies]

From reader reviews:

Cesar Smith:

As people who live in often the modest era should be change about what going on or info even knowledge to make these people keep up with the era which can be always change and move forward. Some of you maybe can update themselves by studying books. It is a good choice for you but the problems coming to you actually is you don't know what type you should start with. This Fusarium: Genomics, Molecular and Cellular Biology is our recommendation to help you keep up with the world. Why, because book serves what you want and wish in this era.

Kevin Strickland:

Hey guys, do you wants to finds a new book to see? May be the book with the headline Fusarium: Genomics, Molecular and Cellular Biology suitable to you? The particular book was written by renowned writer in this era. Often the book untitled Fusarium: Genomics, Molecular and Cellular Biology is the one of several books this everyone read now. This kind of book was inspired a lot of people in the world. When you read this publication you will enter the new dimension that you ever know ahead of. The author explained their concept in the simple way, and so all of people can easily to comprehend the core of this guide. This book will give you a large amount of information about this world now. In order to see the represented of the world in this particular book.

Rina Reese:

Do you like reading a e-book? Confuse to looking for your selected book? Or your book ended up being rare? Why so many query for the book? But virtually any people feel that they enjoy regarding reading. Some people likes reading, not only science book but also novel and Fusarium: Genomics, Molecular and Cellular Biology or others sources were given knowledge for you. After you know how the truly amazing a book, you feel need to read more and more. Science publication was created for teacher or maybe students especially. Those books are helping them to include their knowledge. In additional case, beside science guide, any other book likes Fusarium: Genomics, Molecular and Cellular Biology to make your spare time considerably more colorful. Many types of book like here.

Andrea Behnke:

As a university student exactly feel bored in order to reading. If their teacher questioned them to go to the library or make summary for some publication, they are complained. Just tiny students that has reading's soul or real their passion. They just do what the teacher want, like asked to the library. They go to generally there but nothing reading critically. Any students feel that looking at is not important, boring as well as can't see colorful pictures on there. Yeah, it is being complicated. Book is very important in your case. As we know that on this time, many ways to get whatever we really wish for. Likewise word says, ways to reach Chinese's country. Therefore this Fusarium: Genomics, Molecular and Cellular Biology can make you feel more interested to read.
