Alzheimers Disease: Advances for a New Century (Advances in Alzheimer's Disease) George Perry, J. Avila., M. A. Smith, A. Sorensen, X. Zhu

This volume is a companion to the highly successful book published in association with the Journal of Alzheimers Disease (JAD) on the centennial of Alzheimers discovery: Alzheimers Disease: A Century of Scientific and Clinical Research. Instead of looking back, this collection, Alzheimers Disease: Advances for a New Century, will look forward. Using scientometric analysis the most promising developments since the Alzheimer Centennial in 2006 have been substantiated. While prior trends and advances in genetics, amyloid-, tau, neuropathology, and oxidative stress continue as active areas, emergent areas impacting the transition from normal cognition to Alzheimers disease such as diagnostic imaging, biomarkers, metabolism, and lifestyle (areas conceived only a few years ago) now dominate the debate. Invited contributors have summarized their landmark publications identified by our analysis and have put them into perspective, explaining the impetus behind the work, the contribution of the results to the field, and who played a role in the work.

IOS Press is an international science, technical and medical publisher of high-quality books for academics, scientists, and professionals in all fields.

Some of the areas we publish in:

- Biomedicine
- Oncology
- Artificial intelligence
- Databases and information systems
- Maritime engineering
