Kerns Thomas

Environmentally Induced Illnesses: Ethics, Risk Assessment and Human Rights Kerns Thomas

Thomas Kern's book is the first to directly address the ethical dimension of managing environmental health and ubiquitous toxicants (such as solvents, pesticides, and artificial fragrances). This work includes recent medical literature on chronic health effects from exposure to toxicants and the social costs of these disorders; relevant historic and human rights documents; recommendations for public policy and legislation; and primary obstacles faced by public health advocates. College instructors and students, victims of chemical sensitivity disorders, public health workers, scientists, and policymakers who are interested in the challenge of these emerging epidemics will find Kern's text highly informative.
