Javier Fernandez Gonzalez

Mastering Concurrency Programming with Java 8 Javier Fernandez Gonzalez

Master the principles and techniques of multithreaded programming with the Java 8 Concurrency API

About This Book

- Implement concurrent applications using the Java 8 Concurrency API and its new components
- Improve the performance of your applications or process more data at the same time, taking advantage of all of your resources.
- Construct real-world examples related to machine learning, data mining, image processing, and client/server environments

Who This Book Is For

If you are a competent Java developer with a good understanding of concurrency but have no knowledge of how to effectively implement concurrent programs or use streams to make processes more efficient, then this book is for you.

What You Will Learn

- Design concurrent applications by converting a sequential algorithm into a concurrent one
- Discover how to avoid all the possible problems you can get in concurrent algorithms
- Use the Executor framework to manage concurrent tasks without creating threads
- Extend and modify Executors to adapt their behavior to your needs
- Solve problems using the divide and conquer technique and the Fork/Join framework
- Process massive data sets with parallel streams and Map/Reduce implementation
- Control data-race conditions using concurrent data structures and synchronization mechanisms
- Test and monitor concurrent applications

In Detail

Concurrency programming allows several large tasks to be divided into smaller sub-tasks, which are further processed as individual tasks that run in parallel. All the sub-tasks are combined together once the required results are achieved; they are then merged to get the final output. The whole process is very complex. This process goes from the design of concurrent algorithms to the testing phase where concurrent applications need extra attention. Java includes a comprehensive API with a lot of ready-to-use components to implement powerful concurrency applications in an easy way, but with a high flexibility to adapt these components to your needs.

The book starts with a full description of design principles of concurrent applications and how to parallelize a sequential algorithm. We'll show you how to use all the components of the Java Concurrency API from basics to the most advanced techniques to implement them in powerful concurrency applications in Java.

You will be using real-world examples of complex algorithms related to machine learning, data mining, natural language processing, image processing in client / server environments. Next, you will learn how to use the most important components of the Java 8 Concurrency API: the Executor framework to execute multiple tasks in your applications, the Phaser class to implement concurrent tasks divided into phases, and the Fork/Join framework to implement concurrent tasks that can be split into smaller problems (using the divide and conquer technique). Toward the end, we will cover the new inclusions in Java 8 API, the Map and Reduce model, and the Map and Collect model. The book will also teach you about the data structures and synchronization utilities to avoid data-race conditions and other critical problems. Finally, the book ends with a detailed description of the tools and techniques that you can use to test a Java concurrent application.

Style and approach

A complete guide implementing real-world examples with algorithms related to machine learning, data mining, and natural language processing in client/server environments. All the examples are explained in a step-by-step approach.

From reader reviews:

Alma Bulger:

Have you spare time for just a day? What do you do when you have more or little spare time? Yep, you can choose the suitable activity with regard to spend your time. Any person spent their own spare time to take a wander, shopping, or went to the particular Mall. How about open or perhaps read a book titled Mastering Concurrency Programming with Java 8? Maybe it is to be best activity for you. You understand beside you can spend your time along with your favorite's book, you can smarter than before. Do you agree with it is opinion or you have some other opinion?

Robert Monson:

Now a day people who Living in the era wherever everything reachable by connect to the internet and the resources inside it can be true or not involve people to be aware of each facts they get. How many people to be smart in receiving any information nowadays? Of course the solution is reading a book. Studying a book can help persons out of this uncertainty Information specially this Mastering Concurrency Programming with Java 8 book because this book offers you rich details and knowledge. Of course the details in this book hundred per-cent guarantees there is no doubt in it you may already know.

Judy Brewer:

This Mastering Concurrency Programming with Java 8 is great reserve for you because the content that is certainly full of information for you who have always deal with world and still have to make decision every minute. This book reveal it data accurately using great coordinate word or we can point out no rambling sentences in it. So if you are read this hurriedly you can have whole data in it. Doesn't mean it only offers you straight forward sentences but challenging core information with wonderful delivering sentences. Having Mastering Concurrency Programming with Java 8 in your hand like getting the world in your arm, details in it is not ridiculous a single. We can say that no book that offer you world with ten or fifteen small right but this guide already do that. So , this is certainly good reading book. Hey there Mr. and Mrs. busy do you still doubt this?

Juanita Cooke:

Many people said that they feel weary when they reading a reserve. They are directly felt it when they get a half regions of the book. You can choose typically the book Mastering Concurrency Programming with Java 8 to make your personal reading is interesting. Your own personal skill of reading expertise is developing when you just like reading. Try to choose basic book to make you enjoy to see it and mingle the feeling about book and reading through especially. It is to be initially opinion for you to like to open up a book and study it. Beside that the book Mastering Concurrency Programming with Java 8 can to be a newly purchased friend when you're really feel alone and confuse in doing what must you're doing of their time.
